

Grading Rubric for Application Lab Activities:

Each lab activity will be graded out of 10 points: 5 for completeness and 5 for participation. Please use the following rubric to guide you in assigning point values. Each group will turn in one assignment, and all members of the group receive the same grade on the project, unless someone is not present in recitation, in which case that person receives a score of 0.

PARTICIPATION:

0 points: Student not present in recitation.

2 points: Group makes poor progress and is not engaged with the activity (e.g. routinely looking at cell phones, gossiping, etc).

4 points: Group is focused throughout most of the class period and makes reasonable progress on the activity.

5 points: Group is engaged and works diligently on the activity throughout the class period.
[NOTE: this does not necessarily mean completely finishing the activity]

CORRECTNESS (of completed work):

0 points: Student not present in recitation.

2 points: Work had substantial errors and is mostly incorrect.

3 points: Work was largely correct but had some significant errors.

4 points: Work was mostly correct, but had a few minor errors throughout.

5 points: Work was almost entirely correct. Very minor errors only.

Note that although the rubric is quite general, the papers should be graded carefully, with detailed comments so that students can get feedback on their work.
